

Olympic

Tested at 

All temporary traffic barriers must be able to withstand three different classes of wind speeds with the use of a ballast. The standard **BS 8442:2015** states the three classes as the following:

Class A: 26.3 m/s (58 mph)
 Class B: 17.6 m/s (39 mph)
 Class C: 8.7 m/s (19 mph)

The Olympic Barrier system was tested under strict conditions at the Full Scale Wind Tunnel at Mira to determine at which wind speeds the barrier can withstand. Below are the results and guides as to the recommended ballast weight for each Wind Class:

Class C

✓ Passed

Withstood up to 19.9 mph

Recommended Ballast Weight: **0 kg**

Class B

✓ Passed

Withstood up to 46.2 mph

Recommended Ballast Weight: **30 kg**

Class A

✓ Passed

Withstood up to 63.1 mph

Recommended Ballast Weight: **80 kg**

Boxed

✓ Passed

Withstood up to 65.4 mph

Recommended Ballast Weight: **30 kg**
